CCS3.3 下 SEED-XDS560v2PLUS Configure File 文件制作

本文介绍如何在 CCS3.3 下制作.ccs 配置文件。本文以 OMAPL138 为例, 所使用的仿真器为 SEED-XDS560v2PLUS 仿真器。

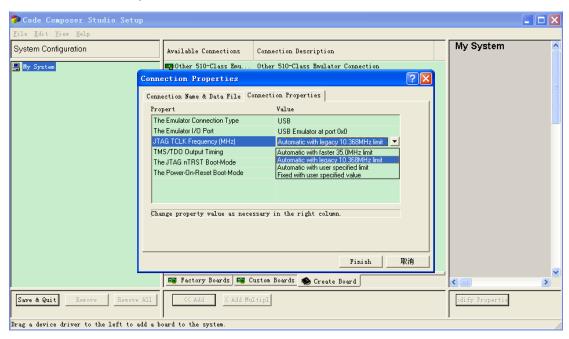

1. 在桌面上双击"Setup CCStudio v3.3", 打开 Code Composer Studio Setup 界面。在"Create Board"下选择仿真器。本例,右键点击"SEED XDS560v2 Emulator", 选择"Add to System ... Enter";

2. 在跳出的 "Connection Properties"对话框中,在 "Connection Name & Data File"界面下填写 "Connection Name"为 "OMAPL138 SEEDXDS560v2 Emulator"。单击 "Next";

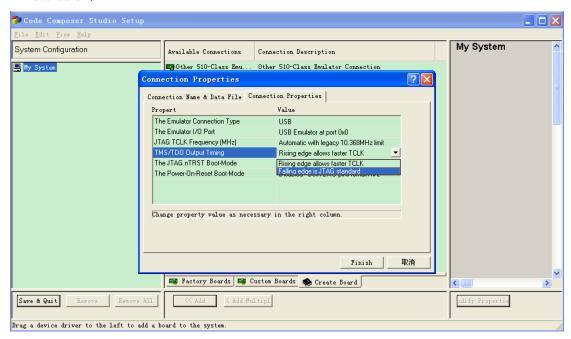

3. 单击 "JTAG TCLK Frequency (MHz)", 在其右的下拉菜单中选择 "Automatic with legacy 10.368MHz limit";

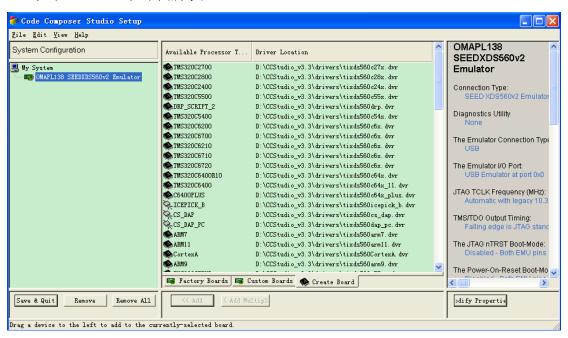

注:此处的参数配置参考 XDS560 的配置进行修改。

4. 单击 "TMS/TDO Output Timing", 在其右的下拉菜单中选择 "Falling edge is JTAG standard";

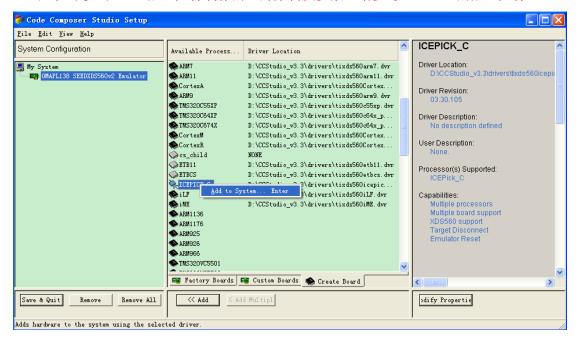

注: 此处的参数配置参考 XDS560 的配置进行修改。

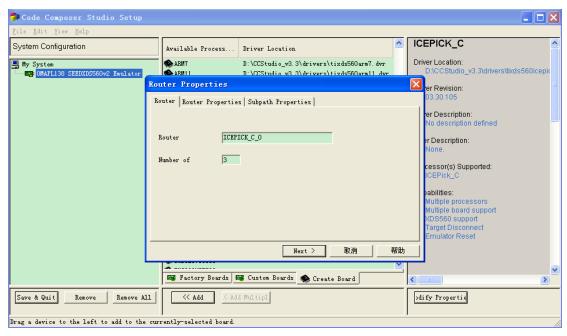

5. 单击 "Finish",如下图所示;

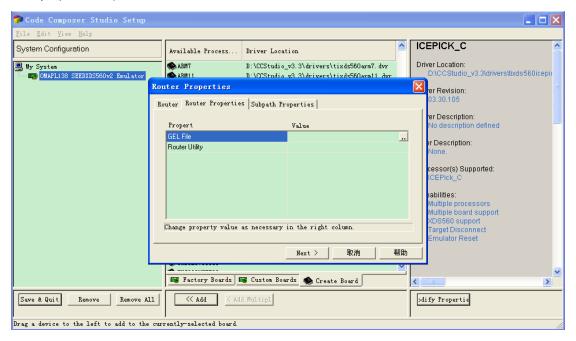

6. 左键点击 "My System"下的 "OMAPL138 SEEDXDS560v2 Emulator",在 "Create Board" 中选择 "ICEPICK_C"。鼠标右键单击 "ICEPICK_C",选择 "Add to System ... Enter"; 注:如下步骤 6~15 配置文件制作的芯片架构及参数,请参考 XDS560 的配置文件。

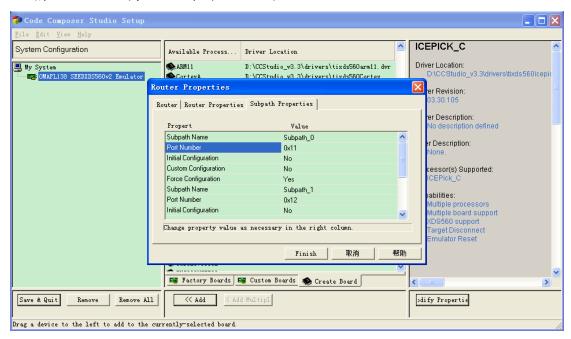

7. 在 Router Properties 对话框中,填写 "Router"下的 "Number of"为 "3",单击 "Next";

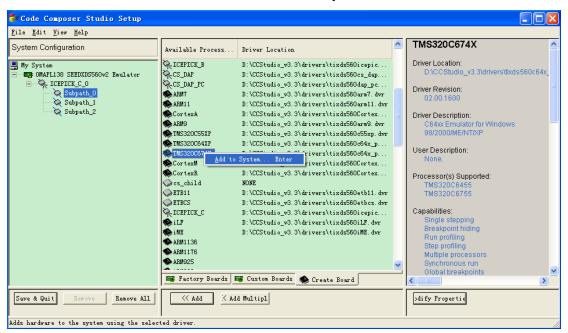

8. 单击"Next":

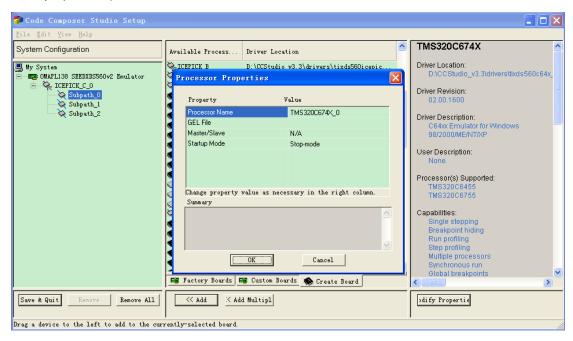

9. 修改 Subpath_0 的 Port Number 为 0x11, Subpath_1 的 Port Number 为 0x12, Subpath_2 的 Port Number 为 0x13, 单击 "Finish";

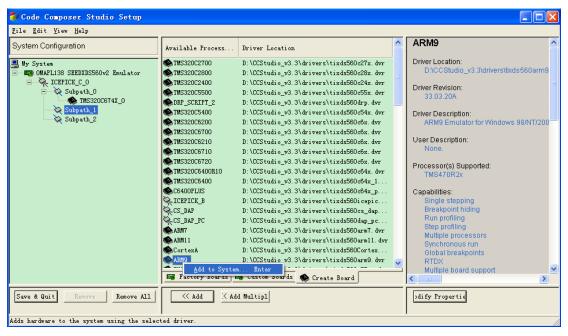

10. 左键点击 "My System"下的 "Subpath_0",在 "Create Board"中选择 "TMS320C674X"。 鼠标右键单击 "TMS320C674X",选择 "Add to System ... Enter";

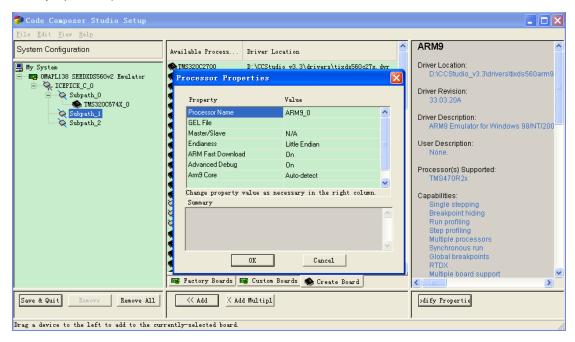

11. 单击 "OK";

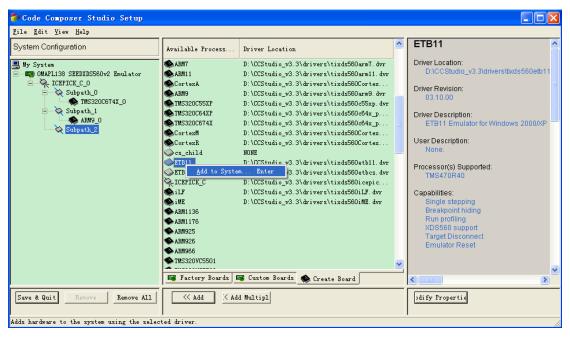

12. 左键点击 "My System"下的 "Subpath_1",在 "Create Board"中选择 "ARM9"。鼠标右键单击 "ARM9",选择 "Add to System ... Enter";

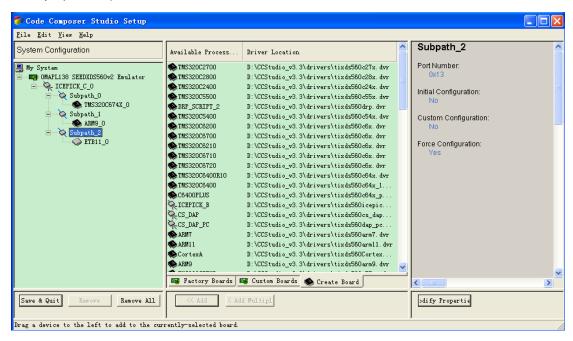

13. 单击 "OK";

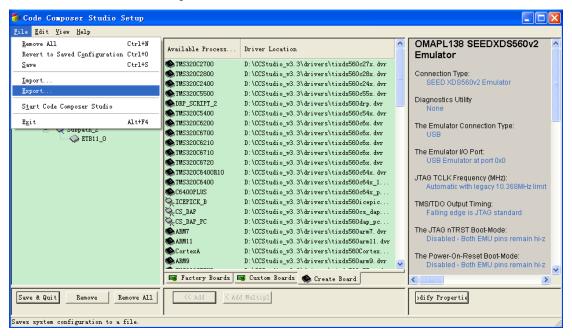

14. 左键点击 "My System"下的 "Subpath_2",在 "Create Board"中选择 "ETB11"。鼠标右键单击 "ETB11",选择 "Add to System ... Enter";

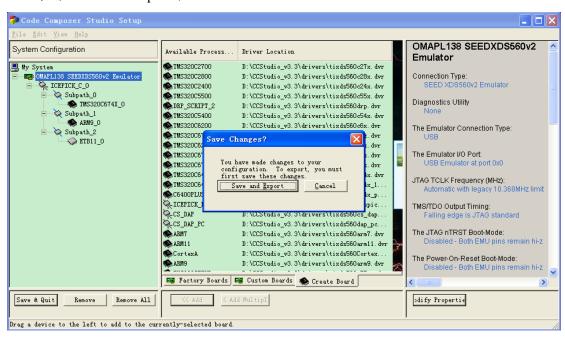

15. 单击 "OK";

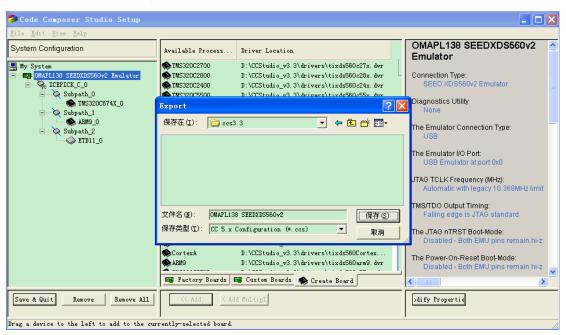

16. 单击 "File", 选择 "Export...";

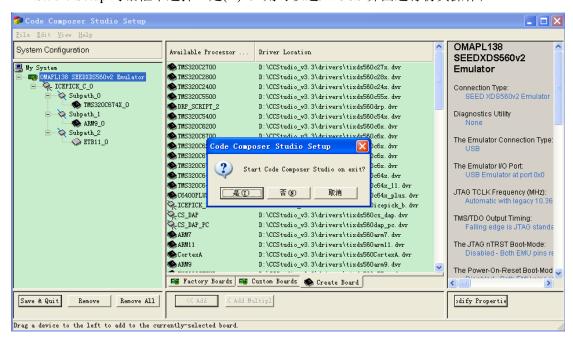

17. 单击 "Save and Export";

18. 选择要保存的路径,编写要保存的文件名,单击"保存",此时在保存的路径上会出现 所保存的.ccs 文件。在本例程中,在路径"E:\560v2\ccs3.3"下可以找到文件 OMAPL138 SEEDXDS560v2.ccs;

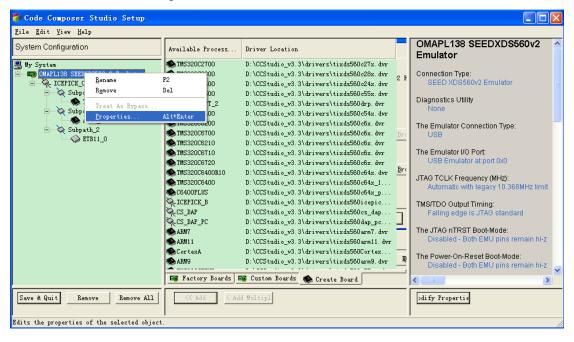

19. 依次连接好 OMAPL138 目标板和 SEED-XDS560v2PLUS 仿真器, 仿真器上电,目标板上电。待仿真器初始化结束后,单击右下角的 "Save & Quit",在跳出的 Code Composer Studio Setup 对话框中选择 "是(Y)",则可以进入 CCS 界面进行仿真操作;

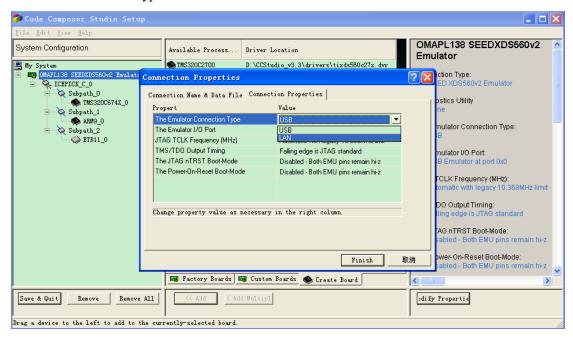

注意事项:

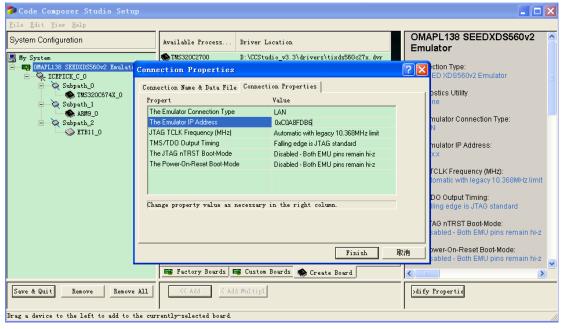

- 1. 请根据芯片型号设置参数 "JTAG TCLK Frequency"和 "TMS/TDO Output Timing";
- 2. 请根据芯片型号设置参数"ICEPICK C":
- 3. 本文所制作的.ccs 文件既可以通过 SEED-XDS560v2 USB 进行仿真,也可以通过 SEED-XDS560v2 LAN 进行仿真。**默认状态为 SEED-XDS560v2 USB**。如果要通过 SEED-XDS560v2 LAN 进行仿真,则:
 - ➤ 左键点击 "My System"下的 "OMAPL138 SEEDXDS560v2 Emulator",单击鼠标右键,选择 "Properties...";

➤ 在 Connection Properties 对话框中选择 "Connection Proerties", 单击 "The Emulator Connection Type", 在其右的下拉菜单中选择 "LAN";

▶ 设置 16 进制的仿真器 IP 地址。本例中 SEED-XDS560v2 仿真器的 IP 地址为 192.168.253.182,对应的 16 进制数为 0xC0A8FDB6。即单击"The Emulator IP Address",在其右的对话框中输入"0xC0A8FDB6";

- ➤ 依次连接好 OMAPL138 目标板和 SEED-XDS560v2 仿真器, 仿真器上电,目标板上电。待仿真器初始化结束后,单击右下角的 "Save & Quit",在跳出的 Code Composer Studio Setup 对话框中选择"是(Y)",则可以进入 CCS 界面进行仿真操作。
- 4. **不支持**任何 CCS3.3 不支持的芯片;
- 5. 不支持 C24xx 系列的芯片。
